

Application program for date palm

General:

Fertilization programs start after harvest, in the autumn or early winter months. The aim of this application is to replenish the trees energy reserves.

At the onset of spring, regular monthly applications commence.

Total annual application of KF is 20-24 liter per acre; first application 6-8 liter per acre and the remaining over the regrowth and fruiting season from spring to harvest.

KF10 suits any irrigation system, making application easy and efficient. Palm trees do not require any foliar spray.

Recommended application rates:

Month	November	March	April	May	June	July
Liters/Hectare	20	10	10	5	5	5
Liters / Acre	8	4	4	2	2	2
